

# Customer Success Story

## Weekly and Emergency Safety Inspections

EQT closely monitors its health and safety performance, risks, and statistics to ensure safe work sites, proper employee training and motivation to work safely, and the continuous identification and evaluation of opportunities to improve.

Several EQT field teams visit wells or construction sites that are either drilling or sending gas via pipelines. These teams conduct weekly safety inspections or in case of a safety incident, an emergency inspection. Field teams use Pulsar for Salesforce on their iPads to collect accurate information that is then reported on and reviewed by management.

## Capturing Images Offline

Pulsar lets the EQT team take pictures or upload from existing albums while they are offline. These images play an important part in analyzing the safety compliance and information.

## Company Description

With 130 years of experience in the natural gas industry and a long-standing history of good corporate citizenship, EQT Corporation is the largest producer of natural gas in the United States. As a technology-driven leader in advanced horizontal drilling, their ability to drill long laterals from large pads in some of the most productive areas in the world gives them one of the lowest cost structures in the natural gas industry, while consistently working safely and responsibly to minimize impacts to the environment.
